PERFORMANCE

Defender socks have been manufactured using **Kermel®** and **FR Viscose®**, yarns tested and proven to ensure unbeatable performance, while providing maximum comfort for the wearer. All grades have been independently laboratory tested to BS Index 2 (BS EN 533: 1997).

www.defendersocks.com

Ridgeview have used their experience in dealing with the major global sporting brands to combine the technologies and produce the ultimate sock for firefighters needing protection in difficult and demanding conditions.

TECHNICAL FEATURES

All grades:

- 50/50 Blend of **Lenzing FR®** and **Kermel®**
- **Lycra®** (by **Invista™**) throughout the whole of the sock to maximise comfort and fit even after multiple wear and washing.
- **Lintoe®** seam – the seam is placed on the outside of the sock to minimise the possibility of chaffing against the toes.
- **Ventilation Channels** – these compliment the **Kermel®** and **Lenzing FR®** by allowing air to pass more easily around the foot and aid the moisture management of the fabric.
- **Elasticated Arch Brace** – knitted in a band around the instep, this prevents the sock from moving down the foot.
- **Anti-Bacterial Treatment** – all socks have a pre-treated wash which is proven to kill 99.9% of all odour-causing bacteria.

Padded:

- **Cushioned Padding** – in the heel, toe and sole ensures added comfort.

Padded Plus:

- **Profilen®** – this yarn has the lowest co-efficient of friction of any known fibre. We knit the yarn into areas of high abrasion and ensure that the sock is able to slide over the foot, rather than rub against it.

FIBRE COMPOSITION

Lightweight:	Kermel® 38%	Lenzing FR® 38%	Nylon 22%	Lycra® (by Invista™) 2%
Padded:	Kermel® 41%	Lenzing FR® 41%	Nylon 17%	Lycra® (by Invista™) 1%
Padded Plus:	Kermel® 35%	Lenzing FR® 35%	Nylon 17%	Lycra® (by Invista™) 1% Profilen® 12%
